Figure 1. The effect of the concentration of the *Agrobacterium* suspension on the transformation efficiency of *Agrobacterium* strains. The *Agrobacterium* strains were incubated with the plant explants for 24 h. The explants were then cultured on the selective medium. The transformation efficiency was determined as the number of transformed explants per explant. The data are the mean \pm SD of three independent experiments. The different letters indicate significant differences ($p < 0.05$) according to the Tukey's test.
